

BreadBank — Data Retention & Deletion Policy

Version 1.0 · Effective July 14, 2026 · Reviewed annually

Principle

We keep personal and financial data only as long as it is needed to provide the service to the user, and we give users a self-service way to erase it.

What we retain, and for how long

Data	Retention
Account profile (email, name, hashed password)	For the life of the account
Financial data from Plaid (transactions, balances, accounts)	For the life of the account, refreshed on sync
Uploaded statement files (parsed)	For the life of the account
Consent record (timestamp + policy version)	For the life of the account
Operational logs	Rolled over by the host; not retained long-term

Deletion

- **User-initiated:** any user can permanently delete their account and all data from **Settings !' Delete account**This:
 1. Calls Plaid `/item/remove` for every linked item, so Plaid stops sharing the user's data.
 2. Deletes all of the user's rows (transactions, accounts, uploads, goals, budgets, categories, merchant rules, Plaid items, usage records) and the user record itself, inside a single database transaction.
- **Effect:** deletion is immediate and irreversible. Encrypted database backups, if any, age out on their normal rotation and are not restored except for disaster recovery.

Third parties

Data shared with Plaid (bank connectivity) and, when AI features are used, Anthropic, is governed by their respective retention policies. Removing a Plaid item stops further data sharing from that institution.

Review

This policy is reviewed at least annually and whenever data handling materially changes. Last review: July 14, 2026.
